Changes to UML:

Added 3 new functions to ServiceLayer.BoardService

1. GetColumnLimit(int boardId, int ColumnOrdinal)
   Returns response with the limit
2. GetBoardName(int boardId)
   Returns response with the name
3. GetColumn(int boardId, int ColumnOrdinal)
   Returns response with list<Task> of the column

As you may realize those functions are not unique in their functionality, the serve as an overloading functions to use with the 'boardID' instead using 'BoardName'. In our implementation of the GUI we found it better to depend on 'BoardID' instead of 'BoardName'.
